

## **Strategic Wealth Preservation Selects WMS for Gold Bullion Vault Storage Facility**

Clearwater, FL (July 22, 2015) - State-of-the-art precious metals -storage facility Strategic Wealth Preservation (SWP) selected and implemented Datex FootPrint WMS at its Cayman Islands vaulting facility. SWP's purpose-built facility is considered to be one of the premier offshore precious metals storage facilities in the world and is ideal for gold and silver bullion storage by North American investors seeking to internationalize their hard assets.

As part of their commitment to provide their clients with the highest level of security and service for the handling and storage of precious metals inventory such as gold, silver, platinum, palladium, rhodium bars and coins, SWP required robust warehouse management software with advanced functionality and flexibility. Datex FootPrint WMS Vault Management Edition includes features specific to the vault storage of precious metals and high value cargo.

Using the Datex warehouse management system, SWP can track and trace lots and perform regular inventory audits using the inventory records. As part of SWP's regular security procedures, all vault staff activities are done under video surveillance. Visual inspections of gold bullion and other precious metals are conducted, metals are weighed and inventory details are recorded within the warehouse management software. The SWP vault staff records content product code or description, hallmark, serial number, quantity and fineness, depending upon what information is required. Overage, shortage as well as any discrepancies or damages to the valuable inventory can be documented within the WMS system. Quality assurance procedures utilized by SWP are accommodated within the WMS software.

"Managing gold bullion and other precious metals inventory for multiple clients with differing needs necessitates highly flexible software" explained Mark Yaxley, Operations and Client Services Manager for SWP. "The expertise of the Strategic Wealth Preservation staff combined with our cutting edge high security facility and the Datex WMS software are an excellent combination to help provide our clients with security and peace of mind."

The Datex WMS can interface with any system including accounting systems and can facilitate processing of credit cards.

### **About Strategic Wealth Preservation (SWP)**

Housed within the impressive award winning complex of Cayman Technology Centre (CTC), Strategic Wealth Preservation (SWP) provides clients with a state-of-the-art highly secure precious metals storage facility. . SWP clients have real time access to statements using a web portal and can visit and inspect their holdings in a secure viewing room with 24 hours' notice. SWP accepts existing holdings or can work with a precious metals dealer to make metals available to investors within the vault. Logistics arrangements can also be made using a company that specializes in the transportation of high value cargo. Gold bullion and other high value metals stored within the facility are fully insured with a leading global insurance company. SWP offers the flexibility of general segregated storage or the rental of a safety deposit box and does not engage in any financial service activities.
